...and we apologise for facilitating this.**

THE
**GUILDFORD
PAVILION**

OVERVIEW

As technology partners for The Guildford Pavilion, we were tasked with improving the Wi-Fi capabilities at the Railway End of the cricket ground. This was done to allow Guildford Cricket Club, the organisers of the Guildford Beer Festival, to use Wi-Fi for their payment terminals. In previous years, 4G had been used, but a quicker and more robust solution was now required.

“ Just to let you know - the Wi-Fi at the Railway End is performing fine with no issues at all. Very many thanks to you and your team. ”

Chad Murrin- Guildford CC

PLANNING

This was a new type of project for us and as such, involved many hours of Googling, YouTube videos and research into various solutions in the hope that it would appear that we knew what we were doing.

Having experience in deploying Wi-Fi solutions by a vendor called Ubiquiti, we discovered their range of radio transmitters and receivers, which are used to create building to building Wi-Fi bridges.

ON-SITE

Working in the sunshine next to the impeccably manicured cricket pitch, this was one of the most enjoyable on-site projects we have completed.

Completed tasks

- Fixing brackets and 8ft pole to a utilities cabinet
- Mounting the radio transmitter, receiver and Wi-Fi access point
- Alignment and configuring of the devices
- Creation of a segregated Wi-Fi network
- New cable run from the interior of the building to the scoreboard.
